Jesse Winton — Bio

I am an NYC based design engineer, specializing in creating exceptional user experiences and interfaces with modern frameworks. Typescript and type-safety die hard. I even designed this resume.

Currently the Design Engineer at Appwrite, helping to craft world-class experiences throughout all of our surfaces.

001 — Appwrite   Design Engineer — 06/24-Present

Built With: Svelte, SvelteKit, MeltUI, SASS, Markdoc, Typescript

What I Do: As the first Design Engineer at Appwrite, my job is to help elevate the Appwrite brand and product by designing and developing world-class interactions, interfaces, and surfaces that help developers feel more empowered to build like a team of hundreds.

002 — PlanetScale   Senior Design Engineer — 03/23-03/24

Built With: Next.js, React, Radix, Tailwind, Markdoc, Typescript

What I Did: As a Senior Design Engineer at PlanetScale, I was directly involved with all design and engineering efforts for PlanetScale's home on the web at planetscale.com. focused on creating well-designed, performant, and delightful user experiences throughout our marketing site and documentation.

003 — VeroSkills   Co-Founder/Head of Engineering — 08/21-02/23

Built With: Next.js, Radix, Tailwind, MySQL, Turborepo

What I Did: During my time at VeroSkills, I led a full-platform rebuild, moving the company from beta into general availability, and created processes to help efficiently grow the engineering org, managing 10+ engineers across disciplines.

004 — One Day Doors & Closets   Front End/Design Lead — 05/20-08/21

Built With: Next.js, SASS, Prismic, Express

What I Did: While working at One Day Doors & Closets, I led a full rebuild of their existing marketing site, moving from a cumbersome 800+ page WordPress monolith into a performant, dynamic Next.js application, allowing for efficient management of dealerships and location specific content. With an external consultant, I was also responsible for the design and implementation of a full company rebrand.

005 — Freelance   Designer/Engineer — 05/2010-05/2020

Built With: Gatsby, Next.js, React, Typescript, PHP, WordPress, HTML/CSS

What I Did: While working as a freelancer, I had a multitude of responsibilities, including working with clients to ensure clear goals, and make technological decisions on a project-by-project basis. I would outline deadlines and KPIs for project success, and would regularly communicate with clients to ensure clarity on those metrics.
